Symbols and their meanings

X = Input AC Voltage / AC Current	H/L = Power supply.
Y = Output DC Voltage / DC Current	Y0 = Start value of output DC
Y2 = End value of output DC	UN = Nominal input voltage.
FN = Nominal Frequency	IN = Nominal input current.
RN = Rated value of output burden	

Mode of Operation

Input signal X is separated from the mains network by using a transformer. The signal is rectified and filtered in rectifier unit. The transformation properties of the measuring transducer are determined in the succeeding characteristics circuit. The isolated output amplifiers transforms the measuring signal into an impressed output signal Y. The circuit is supplied with Auxiliary supply H or L.
